

Propane Powers a Cleaner World

This April 22, 2020 will mark 50 years of Earth Day whose major role has been global awareness to act upon environmental issues. Paraco celebrates this important Earth Day milestone. We take environmental concerns very seriously and are proud to be in the propane industry, an industry that promotes sustainable energy sources and strives to make positive impacts on our environment.

Individually and as a whole, we can work together in making an impact that helps protect our world, taking steps to help make it a healthier place to live.

Caring for the environment is everyone's responsibility. By choosing propane, one of the cleanest energy sources available today, you're making a change for the better. Switching to propane is an immediate and effective way to make a positive impact on the environment, because propane, a low-carbon alternative fuel produces significantly fewer greenhouse gas emissions than most other energy sources. Additionally, propane is a non-poisonous, non-toxic fuel that won't contaminate soil or groundwater, so it's safe to use anywhere.

Propane is not only the smart choice for today, but it's the right choice for tomorrow because soon, more of the propane we use will be made from renewable sources. No one solution or energy source can solve the long-term dilemmas we face. When it comes to things like water heaters, boilers or powering buses and forklifts, low-emissions propane is part of the larger solution that includes renewables and other clean energy sources. Moreover, because propane is cost efficient, convenient, versatile and reliable, it helps lead a clean fuel revolution in multiple industries from landscaping to home construction, textiles and farming, sparking innovations that will help keep our planet cleaner for generations to come.

Each of us can rise to the occasion, helping to protect and restore our planet. During this time of social distancing, a couple of great "today" ways you can help impact the future of our earth include starting or supporting an online organization with assistance of your local community members --- teachers, friends, family, neighbors, elected officials. You can also make a personal effort to purchase green and reduce waste each and every day. For more about this important citizen science initiative, click [here](#).
