

Smell Gas? Don't Delay — Act Immediately

Severe weather events can cause damage to your propane tank and gas lines.

Although propane is naturally odor-free, a foul-smelling additive is mixed with it so gas leaks can be detected. This odor is similar to a skunk's spray or rotten eggs.

If you smell this odor inside OR outside your residence or business, please take the following steps immediately:

1. **Turn off the valve at the tank** if you can safely do so.
2. **Evacuate the building** and call your local fire department from a phone away from the building.
3. **Contact Paraco.** Do not return to the area until the proper authorities have inspected the area and cleared you to do so.
